

Restore **balance**

with the natural pest control cycle

Many insect pests have natural enemies that help prevent outbreaks. Broad-spectrum pesticides kill beneficial insects too, destroying the natural balance of insects in your garden.

Instead of spraying, try this:

Beneficial Insects:

Your garden may already have beneficial insects and insectary plants. Look around for plants that attract beneficial insects by providing food (nectar and pollen) or shelter.

Syrphid Fly

Green Lacewing

Ladybird Beetle

Soldier Beetle
